OBJECTIVE

Motivated Computer Science and Engineering (AI) student with strong programming and machine learning skills, aiming to develop intelligent and efficient software solutions for real-world applications. Eager to learn new technologies and contribute to innovative projects that bridge the gap between AI and practical problem-solving

EDUCATION

Amrita Vishwa Vidyapeetham <i>Bachelor of Technology in Computer Science and Engineering (AI) (CGPA: 8.87/10)</i> FIITJEE <i>Board of Intermediate Education, Andhra Pradesh (BIEAP) (95.5%)</i> Modern High School <i>Board of Secondary Education of Andhra Pradesh (BSEAP) (100%)</i>	June 2023 – Present Kasavanahalli, Bengaluru June 2021 – June 2023 Vijayawada, Andhra Pradesh June 2021 Chilakaluripet, Andhra Pradesh
--	---

PROJECTS

YuktiJobs – Job Portal <i>React, Node.js, Express, MongoDB, RapidAPI, JWT, Recharts</i> • Developed a full-stack job portal with live job feeds using RapidAPI, enabling users to search and apply for roles efficiently. • Implemented secure OTP-based authentication and role-based access control using JWT for recruiters and job seekers. • Built interactive dashboards with Recharts and a skill-based recommendation system for job and course suggestions.	Nov 2025
Zero Waste Initiative Food Donation Platform <i>Python, Django, SQL, Scikit-learn, Pandas</i> • Built a Django-based platform connecting food donors with NGOs to reduce surplus food wastage and streamline redistribution. • Developed an ML regression model to generate urgency scores based on expiry time and quantity for efficient prioritization. • Implemented role-based dashboards and an Explainable AI chatbot to enhance transparency and pickup scheduling.	May 2025
Smart Water Surveillance System <i>Python, Django, Machine Learning, IoT, ThingSpeak</i> • Designed an IoT-based system to monitor water quality parameters in real time using sensors and ThingSpeak cloud integration. • Developed a Django dashboard for live visualization and alerts based on critical water quality thresholds. • Trained a Random Forest model achieving 97.2% accuracy to classify water as clean or contaminated.	May 2025

TECHNICAL SKILLS

Programming Languages: Python, Java
Web Technologies: HTML5, CSS3, JavaScript, React.js, Django
Databases: SQL, MongoDB, Oracle
Machine Learning: Scikit-learn, Pandas, NumPy, Matplotlib
Cloud & DevOps: AWS (Foundations), Docker
Core Concepts: Object-Oriented Programming (OOP), REST APIs, Data Structures & Algorithms
Tools: Git/GitHub, VS Code, Postman

CERTIFICATIONS

- Database Management System (DBMS) SQL – Complete Pack — Infosys Springboard.
- Learning Full Stack Development — Infosys Springboard.
- AWS Academy Cloud Foundations (20 Hours) — AWS Academy Graduate.

PUBLICATIONS

- “Smart Water Surveillance System for Critical Points in Food Industry Using IoT and Machine Learning”, presented at IEEE INSPECT 2025, ABV-IIITM Gwalior; developed a multi-node IoT system with real-time monitoring and ML-based classification achieving 97.2% accuracy.
- “Smart Image Cleanup Tool: An AI-Driven Solution for Efficient Image Management”, presented at EAI IC4S 2025; built an AI-driven system using perceptual hashing, Laplacian variance, and face recognition (OpenCV, Dlib) for automated image filtering and organization.
